

MICHAEL PRIMAK

SENIOR SOFTWARE DEVELOPER

Nine years building and running web and mobile products end to end: React Native apps on both app stores, TypeScript/Node APIs on PostgreSQL, Next.js front ends, and the Docker and Linux infrastructure underneath. I ship LLM features into production with tests and confidence gating, and I am as comfortable with clients and coordinating a team as I am in the codebase.

WORK EXPERIENCE

Good Fights (goodfights.app) / Sept 2025 - Present / Remote

Founder & Sole Developer

- Designed, built and operate the whole product: React Native (Expo) apps live on the App Store and Google Play, a Next.js web app, and a TypeScript/Node REST API on PostgreSQL with Prisma.
- Grew it to 3,600+ registered users, 79,000+ fight ratings and 1,400+ written reviews, migrating the Fighting Tomatoes user base onto the new platform. The catalogue covers 15,000+ fights, 1,600+ events and 10,500+ fighters back to 1993 and is kept current by daily automations.
- Built Claude-based enrichment that writes catalogue content and a preview-then-results article for every numbered UFC card, gated on a confidence score so output the model is unsure about is never published. Covered by Jest tests, including one that checks quoted material against its source.
- Run 30+ scheduled jobs on the VPS for scrapers, Brave Search lookups, Claude API enrichment, backups, deduplication and freshness checks, each with per-job locking and failure alerts.
- Run production myself: a Docker-built API on Render, a Linux VPS under systemd and cron, Prisma migrations, Cloudflare R2 storage, push notifications, PostHog analytics, SEO and over-the-air app updates.

LGBT Voice Tanzania / 2024 - Present / Remote

Web Developer

- Redesigned, built, deployed and maintain the WordPress site for an LGBT rights advocacy group, set up so a small non-technical team can publish without a developer.

SKILLS

LANGUAGES

- ⚡ TypeScript
- ⚡ JavaScript
- ⚡ Python
- ⚡ PHP
- ⚡ SQL
- ⚡ HTML & CSS

FRONT END & MOBILE

- ⚡ React
- ⚡ React Native (Expo)
- ⚡ Next.js
- ⚡ Tailwind CSS
- ⚡ WordPress
- ⚡ WooCommerce

BACK END & DATA

- ⚡ Node.js
- ⚡ REST APIs
- ⚡ PostgreSQL
- ⚡ Prisma
- ⚡ MySQL
- ⚡ Web scraping
- ⚡ Data pipelines & transformation

ARTIFICIAL INTELLIGENCE

- ⚡ LLM features in production (Claude)
- ⚡ Confidence gating & output validation
- ⚡ AI-assisted development (Claude Code)

INFRASTRUCTURE & TESTING

- ⚡ Docker
- ⚡ Linux VPS
- ⚡ GitHub Actions
- ⚡ Jest
- ⚡ Vercel
- ⚡ Render
- ⚡ App Store & Google Play release

WORK EXPERIENCE, CONTINUED

Zerion Software / Apr 2024 - Nov 2024 / Remote

Implementation Engineer

- Adapted a mobile data-collection platform to each client's use case: worked with customers on what they were capturing and how the product should receive and process it, then made the GUI and JavaScript changes to fit.
- Acted as the link between what customers asked for and what the product could do, across client and internal teams.

WellnessLiving Systems Inc. / 2018 - 2020

White Label App Dept. Coordinator

- Coordinated a team of developers, designers and support staff delivering white-label mobile apps to B2B clients. Worked with those clients through delivery: gathering what they needed, translating it for engineering and design, and staying with the account through launch and support.

Fighting Tomatoes / 2016 - 2025 / Remote

Web Developer

- Built and operated the interactive fight-rating web app that Good Fights grew out of, in JavaScript, PHP, MySQL and Python: user accounts, ratings, comments and search.

Self-employed / 2016 - 2025 / Remote

Freelance Web Developer

- Built and maintained business websites and WordPress/WooCommerce sites for small and mid-sized clients, owning consultation, design, build, deployment and maintenance.

SELECTED PROJECTS

- **goodfights.app** - Combat-sports fight-rating platform: React Native apps on both stores, a Next.js web app and a TypeScript/Node API on PostgreSQL, with daily automations (scrapers, Brave Search and Claude API processing) and live event tracking. Founded, built and run solo.
- **lgbtvoicetz.org** - Redesigned and built the WordPress site for LGBT Voice Tanzania so a small non-technical team can publish and manage it themselves.
- **meafordosteopathy.com** - Business website with integrated online booking for a local health clinic.
- **avoidjawsurgery.com** - Rebuilt a slow WordPress site as dependency-free static HTML. Every page and 100 testimonials migrated word for word and fully redesigned, with sitemap and robots preserved so search rankings carried over.
- **michaelprimak.ca** - This portfolio: Next.js, TypeScript and Tailwind, statically generated, with a live section that reads real figures from the Good Fights production API.

EDUCATION

Georgian College
Big Data Analytics

Canadian Academy of Osteopathy
Master of Osteopathic Sciences

Laurentian University
Bachelor of Human Kinetics

WORKING STYLE

Comfortable as the solo developer who owns a product, or as one engineer on a larger team.

Experienced on both sides of delivery: gathering requirements directly from clients, and coordinating the developers and designers who build them.

Remote from rural Ontario, Canada, on Eastern time.

COVER LETTER BY

MICHAEL PRIMAK

SENIOR SOFTWARE DEVELOPER

Hi, my name is Michael Primak and I am looking for a senior software developer position. I am a full-stack developer who builds and runs products end to end: React Native apps on both app stores, TypeScript and Node APIs on PostgreSQL, Next.js front ends, and the Docker and Linux infrastructure underneath them. Most recently I founded and built Good Fights, a fight-tracking app with thousands of users that is kept current every day by automated systems I designed, including LLM features that are tested and confidence-gated before anything reaches a user. Above all, I cherish my ability to learn new skills and technologies quickly, to stay current in the evolving world of software development.

I am looking for work as either your solo developer or as a member of a larger engineering team, and I am comfortable in both roles. I can own the whole process, from consulting with clients about their goals, through design, build and deployment, to maintenance. I have also worked on the coordination side, running a team of developers, designers and support staff, so I am used to talking with customers and translating what they need for the people who build it.

I work remotely from Ontario, Canada, on Eastern time, and I use AI coding tools every day as a working practice rather than a novelty.

I love making beautiful, functional software products and am eager to find a new place to express my skills. If you are interested in an enthusiastic, positive and talented software developer, please contact me. I would love to meet you, learn about your project and potentially join your organization.

A handwritten signature in black ink that reads "Michael Primak". The script is fluid and cursive, with the first letters of the first and last names being capitalized and prominent.
