SUMMARY

Full-stack developer with nine years building and running web and mobile products end to end. I own the whole stack: React Native apps live on both app stores, TypeScript/Node APIs on PostgreSQL, Next.js front ends, and the Docker and Linux infrastructure underneath. I ship LLM features into production with confidence gating and test coverage, not just prompts. Comfortable in front of customers as well as in the codebase: I have implemented a data-collection platform against live client requirements, and coordinated a team of developers, designers and support staff delivering white-label mobile apps to B2B clients.

SKILLS

Languages	TypeScript, JavaScript, PHP, Python, SQL, HTML, CSS
Front end	React, React Native (Expo), Next.js, Tailwind CSS, WordPress, WooCommerce
Back end	Node.js, Fastify, REST APIs, PostgreSQL, Prisma, MySQL
AI	LLM feature development (Claude), prompt engineering, confidence gating and output validation, AI-assisted development (Claude Code)
Testing & CI	Jest, GitHub Actions, automated type-checking and linting, ESLint
Infrastructure	Docker, Linux VPS, systemd, cron, Cloudflare R2, Vercel, Render, EAS, App Store and Google Play release
Data	Web scraping (Puppeteer, Cheerio), automated data pipelines, PostHog analytics, SEO

EXPERIENCE

Founder & Sole Developer — Good Fights (goodfights.app)

September 2025 – Present · Remote, Ontario

- Designed, built and operate a cross-platform product end to end: React Native (Expo) apps live on the App Store and Google Play, a Next.js web app, and a TypeScript/Node REST API on PostgreSQL with Prisma.
- Built Claude-based enrichment that generates catalogue content, gated on a confidence score so output the model is unsure about is never published; covered by Jest unit tests, including one that verifies quoted material against its source.
- Built more than 30 scheduled GitHub Actions workflows covering scrapers, AI enrichment, database backups, deduplication and content-freshness checks, then moved the daily jobs to VPS cron with per-job locking and failure alerts when the repo went private.
- Operate production personally: a Docker-built API on Render, a Linux VPS running the scrapers and live event trackers under systemd and cron, Prisma migrations against PostgreSQL, Cloudflare R2 image storage, push notifications, PostHog analytics and SEO.
- Grew the product to 3,415 registered users who have submitted 76,516 fight ratings and 1,450 written reviews, migrating the existing Fighting Tomatoes user base onto the new platform.
- Maintain a catalogue of 15,730 fights across 1,635 events and 10,567 fighters dating to 1993, kept current by daily scrapers with Cloudflare bypass.
- Built an automated, Claude-written content system: an SEO-focused preview-then-results article for every numbered UFC card, plus a monthly fighter-rankings article refreshed from live data.
- Ship over-the-air updates so fixes reach users without waiting on a new app-store submission.

Web Developer — LGBT Voice Tanzania

2024 – Present · Remote

- Redesigned, built, deployed and maintain the WordPress site for an LGBT rights advocacy group, set up so a small non-technical team can publish and manage it without a developer.

Implementation Engineer — Zerion Software

April 2024 – November 2024 · Remote

- Adapted a mobile data-collection platform to individual client use cases, working directly with customers to understand what data they were capturing and how the product should best receive, structure and process it.
- Translated client requirements into product changes, making GUI and JavaScript customizations to the mobile app so it fit each customer's workflow.
- Worked remotely across client and internal teams, acting as the link between what customers were asking for and what the product could actually do.

White Label App Dept. Coordinator — WellnessLiving Systems Inc.

2018 – 2020

- Coordinated a team of developers, designers and support staff delivering white-label mobile apps to B2B clients. Worked directly with those clients through delivery — gathering what they needed, translating it for engineering and design, and staying with the account through launch and support.

Freelance Web Developer — Self-employed

2016 – 2025 · Remote

- Built and maintained business websites and WordPress/WooCommerce sites for small and mid-sized clients, owning consultation, design, build, deployment and maintenance.

Web Developer — Fighting Tomatoes

2016 – 2025 · Remote

- Built and operated the interactive rating web app that Good Fights grew out of, in JavaScript, PHP, MySQL and Python — user accounts, ratings, comments and search.

SELECTED PROJECTS

- **lgbtvoicetz.org** — Redesigned and built the WordPress site for LGBT Voice Tanzania, an LGBT rights advocacy group, set up so a small non-technical team can publish and manage it without a developer.
- **avoidjawsurgery.com** — Rebuilt a slow WordPress site as dependency-free static HTML. Every page and 100 testimonials migrated word-for-word, fully redesigned, with sitemap and robots preserved so search rankings carried over. Built AI-assisted with Claude Code and reviewed page by page.
- **meafordosteopathy.ca** — Business website with integrated online booking for a local health clinic.
- **michaelprimak.ca** — This portfolio: Next.js, TypeScript and Tailwind, statically generated, with a live section that reads real figures from the Good Fights production API.

EDUCATION

- Georgian College — Big Data Analytics
- Canadian Academy of Osteopathy — Master of Osteopathic Sciences
- Laurentian University — Bachelor of Human Kinetics
